REC_DS using C_Week 4_COD_Question 3

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Write a program to implement a queue using an array and pointers. The program should provide the following functionalities:

Insert an element into the queue.Delete an element from the queue.Display the elements in the queue.

The queue has a maximum capacity of 5 elements. If the queue is full and an insertion is attempted, a "Queue is full" message should be displayed. If the queue is empty and a deletion is attempted, a "Queue is empty" message should be displayed.

Input Format

Each line contains an integer representing the chosen option from 1 to 3.

Option 1: Insert an element into the queue followed by an integer representing the element to be inserted, separated by a space.

Option 2: Delete an element from the queue.

Option 3: Display the elements in the queue.

Output Format

For option 1 (insertion):-

1. The program outputs: "<data> is inserted in the queue." if the data is successfully inserted.
2. "Queue is full." if the queue is already full and cannot accept more elements.

For option 2 (deletion):-

1. The program outputs: "Deleted number is: <data>" if an element is successfully deleted and returns the value of the deleted element.
2. "Queue is empty." if the queue is empty no elements can be deleted.

For option 3 (display):-

1. The program outputs: "Elements in the queue are: <element1> <element2> ... <elementN>" where <element1>, <element2>, ..., <elementN> represent the elements present in the queue.
2. "Queue is empty." if the queue is empty no elements can be displayed.

For invalid options, the program outputs: "Invalid option."

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 1 10

3
5
Output: 10 is inserted in the queue.
Elements in the queue are: 10
Invalid option.

Answer

```
#include <stdio.h>
#include <stdlib.h>

#define max 5

int queue[max];
int front = -1, rear = -1;

// You are using GCC
int insertq(int *data)
{
   //Type your code here
   if(rear>=max-1)
   {
      return 0;
   }
   else
   {
      queue[++rear]=*data;
      if(front==-1)
      {
         front=0;

      }
      return 1;
   }
}

int delq()
{

   if(rear==-1)
   {
```

```
        printf("Queue is empty.\n");
        return -1;
    }
    else
    {
        int d=queue[front];
        printf("Deleted number is: %d\n",queue[front]);
        if(rear==front)
        {
            rear=front=-1;
        }

        else {
            front++;

        }
        return d;

    }

    //Type your code here
}

void display()
{
    int t=front;
    if(front==-1)
    {
        printf("Queue is empty.\n");
    }
    else
    {
        printf("Elements in the queue are: ");
        for(int i=t;i<=rear;i++)
        {
            printf("%d ",queue[i]);
```

```
    }
    printf("\n");
  }
  //Type your code here
}

int main()
{
  int data, reply, option;
  while (1)
  {
    if (scanf("%d", &option) != 1)
      break;
    switch (option)
    {
      case 1:
        if (scanf("%d", &data) != 1)
          break;
        reply = insertq(&data);
        if (reply == 0)
          printf("Queue is full.\n");
        else
          printf("%d is inserted in the queue.\n", data);
        break;
      case 2:
        delq();  //    Called without arguments
        break;
      case 3:
        display();
        break;
      default:
        printf("Invalid option.\n");
        break;
    }
  }
  return 0;
}
```
