Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Milton is a diligent clerk at a school who has been assigned the task of managing class schedules. The school has various sections, and Milton needs to keep track of the class schedules for each section using a stack-based system.

He uses a program that allows him to push, pop, and display class schedules for each section. Milton's program uses a stack data structure, and each class schedule is represented as a character. Help him write a program using a linked list.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the class schedule to be pushed onto the stack.

Choice 2: Pop class schedule from the stack

Choice 3: Display the class schedules in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

- If the choice is 1, push the given class schedule to the stack and display the following: "Adding Section: [class schedule]"
- If the choice is 2, pop the class schedule from the stack and display the following: "Removing Section: [class schedule]"
- If the choice is 2, and if the stack is empty without any class schedules, print "Stack is empty. Cannot pop."
- If the choice is 3, print the class schedules in the stack in the following: "Enrolled Sections: " followed by the class schedules separated by space.
- If the choice is 3, and there are no class schedules in the stack, print "Stack is empty"
- If the choice is 4, exit the program and display the following: "Exiting the program"
 - If any other choice is entered, print "Invalid choice"

Refer to the sample output for the exact format.

Sample Test Case

Input: 1 d

1 h,6

3

2

```
Output: Adding Section:
   Adding Section: h
   Enrolled Sections: h d
   Removing Section: h
   Enrolled Sections: d
   Exiting program
   Answer
   #include <stdio.h>
   #include <stdlib.h>
   struct Node {
    char data;
     struct Node* next;
   struct Node* top = NULL;
   // You are using GCC
   void push(char value) {
     struct Node*newnode=(struct Node*)malloc(sizeof(Node));
     newnode->data=value;
     newnode->next=top;
     printf("Adding Section : %c\n",newnode->data);
     top=newnode;
      //Type your code here
   void pop() {
     if(top==0)
     {
        printf("Stack is empty.Cannot pop.\n");
        return;
     }
     else
        struct Node*temp=top;
       top=top->next;
        printf("Removing Section: %c \n",temp->data);
```

```
free(temp);
       //Type your code here
     void displayStack() {
       if(top==0)
          printf("Stack is empty\n");
          return;
       }
       struct Node*temp;
     ^temp=top;
       printf("Enrolled Sections: ");
       while(temp!=0)
          printf("%c ",temp->data);
          temp=temp->next;
       }
       printf("\n");
       //Type your code here
     int main() {
char value;
do {
          scanf("%d", &choice);
          switch (choice) {
            case 1:
              scanf(" %c", &value);
              push(value);
              break;
            case 2:
              pop();
הין
break
case 3:
disr'
              break:
              displayStack();
              break;
```
